# Benchmarking Entity Linking for Question Answering over Knowledge Graphs

- └ Introduction

Introduction

---

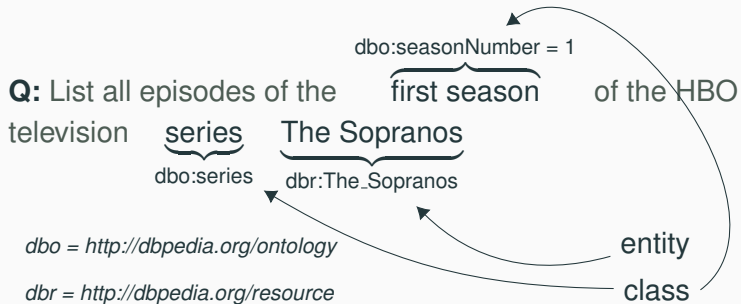

## Introduction

---

## Entity Linking

**Def:** Link parts of a Natural Language passage to their corresponding node in a Knowledge Graph. Usually comprises:

- Recognize the entity mention in the text.
- Disambiguate the mention.

# Benchmarking Entity Linking for Question Answering over Knowledge Graphs

## └ Introduction

## └ Introduction

- We frame it under a QA Task over a KG, although can be done anywhere.

## Motivation

- Lots of QA systems do perform an EL step with good results.
- Asses impact of EL Task on QA systems over KG.

2019-09-25

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### └ Introduction

### └ Introduction

| UNED

#### Motivation

- Lots of QA systems do perform an EL step with good results.
- Asses impact of EL Task on QA systems over KG.

- Lots of systems rely on other tools ToDo := Get some of those tools
- It is important because linking to a certain node will restrict the whole search process inside the KG. So it's impact can be decisive.
- More about the easyness of each dataset on the experiments section.

Benchmarking Entity Linking for Question  
Answering over Knowledge Graphs  
└ Characterization

Characterization

# Characterization

---

## Input Datasets

- QALD {1-4} Unger et al. 2014)  $\leq 200$  QA pairs each
- LC-QuAD (Trivedi et al. 2017) 5K QA pairs

2019-09-25

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### └ Characterization

### └ Characterization

| UNED

- There are other mentions to link (series, sesason Number) but correspond to classes.

#### Input Datasets

- QALD (1-4) Unger et al. 2014)  $\leq 200$  QA pairs each
- LC-QuAD (Trivedi et al. 2017) 5K QA pairs

## Example

```
{
  "id": "37",
  "query": { "sparql": "SELECT ?uri ... },
  "answers": {
    "answer": [{ ...
    }, ...]
  },
  "question": [
    {
      "string": "List all episodes of the first season of the
        HBO television series The Sopranos!",
      "language": "en"
    }
  ]
}
```

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### └ Characterization

└ Characterization

| UNED

## Difficulty?

- Given the Question, how easy is the Entity Linking?

Cases	QALD-1	QALD-2	QALD-3	QALD-4
Identical to DBP uri	92.0%	72.0%	75.0%	80.0%
Missing tokens		4.0%	5.0%	10.0%
Additional tokens	6.0%	1.0%	1.0%	0.5%
Lexical variation	2.0%	5.0%	5.0%	8.5%
Other		18.0%	14.0%	1.0%
Distance method	92.0%	80.0%	83.0%	89.5%
Trigram method	92.0%	84.0%	86.0%	94.5%

2019-09-25

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### Characterization

### Characterization

| UNED

- Numbers are from Unique Entities

QALD-4 Tools: gAnswer (Zou), CASIA (Shizhu), POMELO (Hamon)  
 Creation: Taken from QALD-3 and added more questions manually, QALD-3 was manually crafted. Use until QALD-4 because 5 and 6th versions are more into multilang and were collected by pruning QALD-1-4. QALD-7 features only 214 questions. LC-QuAD Creation: Entity seed list -¿ subgraph generation -¿ sql and question template fill -¿ manual correction and review

#### Difficulty?

- Given the Question, how easy is the Entity Linking?

Cases	QALD-1	QALD-2	QALD-3	QALD-4
Identical to DBP uri	92.0%	72.0%	75.0%	80.0%
Missing tokens		4.0%	5.0%	10.0%
Additional tokens	6.0%	1.0%	1.0%	0.5%
Lexical variation	2.0%	5.0%	5.0%	8.5%
Other		18.0%	14.0%	1.0%
Distance method	92.0%	80.0%	83.0%	89.5%
Trigram method	92.0%	84.0%	86.0%	94.5%

## Problem

- Actual collections for QA are easy for Entity Linking.

**Q:** List all episodes of the of the HBO television series

The Sopranos

dbr:The\_Sopranos

replace " " → "-"

2019-09-25

Benchmarking Entity Linking for Question  
Answering over Knowledge Graphs  
└ Automatic Generation

Automatic Generation

## Automatic Generation

---

**Objective:** Complex dataset for Entity Linking

## Strategy

1. Develop method to detect easy mentions
2. Remove easy mentions from collection

## Methods

- Trigram based mention detection
- Distance based mention detection

2019-09-25

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### Automatic Generation

### Automatic Generation

| UNED

Distance metric: Levenstein

- Trigram: Trigram window slide minimizing distance.
- Distance: Maximum span of text minimizing distance, same number of tokens as the database entity.

**Objective:** Complex dataset for Entity Linking

#### Strategy

1. Develop method to detect easy mentions
2. Remove easy mentions from collection

#### Methods

- Trigram based mention detection
- Distance based mention detection

# Benchmarking Entity Linking for Question Answering over Knowledge Graphs

└ Results

Results

## Results

## Released Datasets

Dataset	Unique Q.	Unique E.	Total
QALD-1-EL	3	3	4
QALD-2-EL	11	11	12
QALD-3-EL	13	13	14
QALD-4-EL	38	40	45
LC-QuAD-EL	1204	997	1292
C-EL4QA	1269	1064	1367

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

## └ Results

## └ Results

- QALD datasets shrink by a 50%.
- LCQUAD shrinks by a 70%

Obviously this happens because the questions are automatically generated.

Released Datasets

Dataset	Unique Q.	Unique E.	Total
QALD-1-EL	3	3	4
QALD-2-EL	11	11	12
QALD-3-EL	13	13	14
QALD-4-EL	38	40	45
LC-QuAD-EL	1204	997	1292
C-EL4QA	1269	1064	1367

Benchmarking Entity Linking for Question  
Answering over Knowledge Graphs  
└ Conclusions & Future Work

Conclusions & Future Work

## Conclusions & Future Work

---

## Conclusions

- We found QA that collections do not really tackle the EL problem.
- QA Systems go for automated solutions

## Open Questions

- If Entity Linking were more difficult, how QA system would perform?

2019-09-25

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### └ Conclusions & Future Work

### └ Conclusions & Future Work

| UNED

- Systems like the ones on LC-QuAD paper (Aqua QA ...) ToDo := Extract refs

#### Conclusions

- We found QA that collections do not really tackle the EL problem.
- QA Systems go for automated solutions

#### Open Questions

- If Entity Linking were more difficult, how QA system would perform?

# Benchmarking Entity Linking for Question Answering over Knowledge Graphs

- └ Outcomes

Outcomes

---

## Outcomes

---

## Our main contributions are:

- QA Datasets characterization
- Semi-automatic method to generate complex EL datasets.
- Release large benchmark dataset and baseline for EL in QA (url)

2019-09-25

## Benchmarking Entity Linking for Question Answering over Knowledge Graphs

### └ Outcomes

### └ Outcomes

| UNED

- Method serves also a baseline to test other systems

#### Our main contributions are:

- QA Datasets characterization
- Semi-automatic method to generate complex EL datasets.
- Release large benchmark dataset and baseline for EL in QA (url)

**Thank you!**  
**Questions?**

2019-09-25

Benchmarking Entity Linking for Question  
Answering over Knowledge Graphs  
└ Outcomes

Thank you!  
Questions?

Possible questions:

- Have you tried this with Class linking instead of Entity?
